Be.Well

Animal-friendly products

Organic pig farming

Animal welfare houses for pig farming

Maximum possible animal welfare along with economic success: the guiding principle of the new WEDA Be.Well product range. The product spectrum focuses on the advantages for both the pig and pig farmer, because one thing is clear: animal welfare must be financially viable.

WEDA Be.Well stands for animal-friendly products promoting the health and well-being of the animal to a maximum extent, at the same time enabling economical and safe working. This is the reason why our products are ideal for both conventional and organic pig husbandry.

Do you produce for an animal welfare label, and do you have to meet specific requirements? No problem! For decades we have specialised in customer-specific product solutions and we are glad to assist you with our expertise.

Best of all: the complete range of our pen systems can be combined with deep bedding and roaming space. To achieve the highest level of hygiene our pens are made of smooth plastic boards and profiles which enable easy cleaning of the pig house.

- animal-friendly products
- improvement of animal health
- economical, safe working
- reduction of emissions

Organic pig farming

Are you passionate about organic? We're your ideal partner!

Obligations in organic pig farming are wide-ranging since the welfare of pigs must be ensured and maximum quality levels guaranteed for the end consumer. Houses with roaming areas, a great degree of space and freedom of movement as well as the provision of straw are just some of the many requirements.

We are specialists for individual housing construction in pig farming. Whether for conventional or organic husbandry, we design and construct the house you need. During this process we draw on our decades of experience in the industry.

- houses with roaming space
- plenty of room and freedom of movement
- no fixing of the animal
- provision of straw

House with roaming space

The integrated mechanism lifts the gate out of the straw.

Straw is your favourite solution? We're with you!

You produce conventionally for the animal welfare label of a chain of supermarkets and have to meet certain requirements, such as regularly providing straw? No problem – we offer you the perfect product solutions from our Be.Well range for optimum production results and a high degree of animal welfare.

- less tail biting
- increased crude fibre consumption
- continuous access to feed
- straw as edible activity material

More animal welfare? We make it happen!

Are you a conventional pig farmer and would you like more animal welfare? That's great – we have the right products. Whether you need breeding stalls with self-catching gates of all types, self-catching pens type „Rocker“ or group pens with feeding station and straw surfaces, our product portfolio is fully geared to your needs.

Simply contact us – we would be happy to advise you and build the house of your choice!

- **more peace for your animals**
- **feed intake in a protected environment**
- **animals decide for themselves whether or when they want to leave the breeding stalls or the feeding station**
- **straw can be added easily**

Combined roaming space

Self-catching pen type "Rocker"

Group pens with feeding station and lockable deep bedding area

Farrowing area

You're counting on more movement? So are we.

Would you like to offer your sows more freedom of movement in the farrowing area, and are you thinking about installing movement pens or farrowing welfare pens? Then we're exactly the right contact for you!

Your big advantage: we've been dealing with the product sector of movement pens and farrowing welfare pens for a long time. Among other things, we work in close cooperation with Finnish farmers who have been successfully using our movement pens for many years and who share their experience with us. Make the most of this experience and select us as the partner for your next project.

- **movement pens and farrowing welfare pens**
- **more space for sows and piglets**
- **good overview**
- **safe working with animals**
- **easy cleaning**

Finishing and piglet

Feeding place ratio 1:1? No problem for us!

Your focus is on keeping piglets and finishing animals, you would like to offer your animals a feeding place ratio of 1:1 and also do without tail docking? Our products will help you! No matter whether you farm on solid surfaces or gaps, with piglet balcony or at ground level, we offer you the ideal solution for your house.

- feeding place ratio 1:1
- less tail biting
- farming on straw

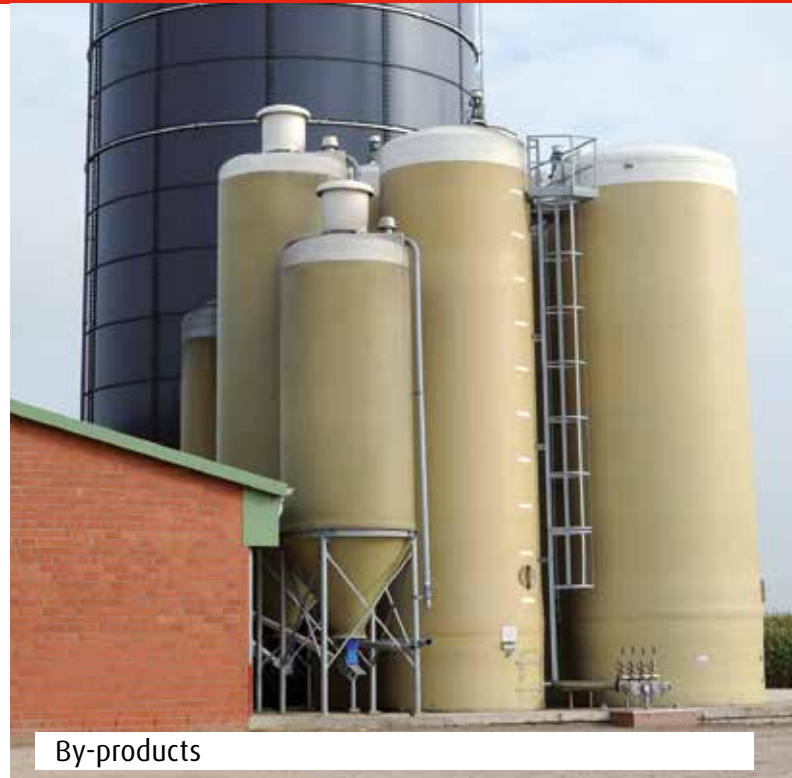

Farming of undocked animals on a solid surface with liquid feeding on long trough including feeding time measurement

Piglet balcony

Farming on 2/3 closed surface with long trough

Healthy animals and cost-efficient feeding? We can help you!

Are you active in organic pig husbandry and experiencing problems with the lower nutrient content of feeds? Or do you work in conventional farming and want to optimise your feed costs? We have the technology for that.

With our proven fermentation concept, certain feed components can be modified to provide a type of 'pre-digestion'. This is beneficial since animals need far less energy and effort to digest fermented food and can also absorb nutrients a lot better. The result: a significant reduction of nitrogen and phosphorus.

Due to the low pH value, the intestinal health of the animals is also significantly promoted and the use of antibiotics and medication are reduced by up to 80%. Furthermore, the incidence of coli and salmonella has been verifiably shown to decrease by 85-90%.

Are you on the lookout for product solutions enabling you to feed your animals simply and reliably with cost-effective, high quality food industry by-products – whether organic or conventional? Then we are exactly the right partner for you.

Simply contact us – we'll be happy to advise.

- **feeding of by-products and CCM**
- **cost savings**
- **healthier animals through fermentation and WEDA hygiene package**
- **investment costs for fermentation usually pay back in significantly less than 3 years**
- **rapeseed and peas instead of soy**
- **organic certified bacteria**
- **80% less medication and antibiotics required**
- **reduction of salmonella and coli by 85-90%**
